Professional Summary

Software Engineer with 3 years of experience **owning end-to-end delivery** of **responsive web applications** using **Angular**, **React**, and **Next.js**, writing clean **HTML5**, **CSS3**, and **JavaScript (ES6+)**, and integrating **AI/ML APIs**, **RAG pipelines**, and **LLM-based services** into production interfaces. Independently drove design, development, and delivery of enterprise-grade UI and **business proposals/RFPs** for clients including **NPCI**, **Bosch**, **SEBI**, and **Tata**, leading an **Angular v8-to-v19 migration** that cut bundle size by ~30% and eliminated 3+ years of technical debt. AWS Certified Cloud Practitioner and National Winner, Smart India Hackathon 2022.

Technical Skills

- **Front-End:** Angular (v8–19), ReactJS (incl. React 19), Next.js (incl. Next.js 16), HTML5, CSS3, JavaScript (ES6+), TypeScript, Responsive Design, Browser Compatibility
- **UI Libraries & State Management:** Angular Material, Material UI, Chart.js, Recharts, React Flow, Redux, NgRx, Zustand, AG Grid, Tailwind CSS, Framer Motion
- **AI / LLM Integration:** LangChain, LLM APIs (Claude, OpenAI, Groq), Prompt Engineering, Generative AI, RAG Pipelines, Vector Embeddings, SSE Streaming, Chatbot / Smart Assistant UI
- **Cross-Platform & Mobile:** React Native (Android & iOS), Capacitor (Web-to-Native), Android Studio, Xcode
- **APIs & Tools:** RESTful APIs, SSE, Socket.io, Git, Docker, CI/CD Pipelines, Agile/Scrum, Code Reviews, Sentry, Vercel Analytics
- **Back-End & Cloud:** Node.js, Python, Flask, Express, AWS (Certified Cloud Practitioner), GCP, MySQL, PostgreSQL, MongoDB

Experience

CoRover Private Limited

Nov 2023 – Present

Software Engineer | Agile/Scrum Environment

Bengaluru, India

PortGPT – AI-Powered Port Operations Platform (*portgpt.sahanasystem.com*) – *Owned End-to-End as Lead Frontend Engineer*
Next.js 16 · React 19 · TypeScript · Tailwind CSS · Capacitor · Recharts · Framer Motion

- Owned and delivered, end-to-end, the full-stack frontend for an enterprise **AI assistant** serving **VOC Port** operations, single-handedly taking the product from architecture to deployment across web, iOS (TestFlight), and Android from a single **Next.js** codebase via **Capacitor**.
- Architected and built a real-time **AI chat interface** with **SSE streaming**, conversation history, message export (PDF/DOCX), and a typewriter response UX using **flushSync** for immediate DOM updates.
- Independently designed and developed a **knowledge base management system** that supports bulk document upload, training, website crawling (batch jobs with live SSE progress), and a searchable document inventory.
- Led design and delivery of an **operations analytics dashboard** with **30+ KPIs** across vessel, cargo, container, and environmental data using **Recharts**, with live port pulse and date-range filtering.
- Built, end-to-end, an **AI-powered report & template engine** that produces fertiliser, MIS, traffic and Forecast reports as PDFs, plus department-wise tender/circular drafts with DOCX export.
- Implemented **JWT auth** with auto-refresh, **Capacitor SecureStorage** for native credential management, **Sentry** error monitoring, and **Vercel Analytics**.
- Architected and owned a **1,000+ line API client layer** integrating **30+ REST/SSE endpoints** with centralized error handling and token interceptors.
- Reduced manual report compilation from hours to seconds; enabled **natural language querying** of operational data for non-technical port staff.

Software Engineer (Nov 2023 – Mar 2026)

DigiSaathi – NPCI Conversational Platform (*digisaathi.info*) – *200K+ active users*

- Led and owned end-to-end a **responsive web application** in **Angular**, driving the **Angular v8-to-v19 migration** independently — reducing bundle size by ~30%, cutting page load time, and eliminating 3+ years of technical debt; owned the assigned UI module independently from development through bug fixes and enhancements.
- Built fully **responsive** screens using **HTML5**, **CSS3**, and **JavaScript (ES6+)** with complete **browser compatibility**, serving **200K+ users** on a high-traffic government platform with consistent uptime.
- Drove delivery of **AI-powered analytics dashboards** tracking voice/text interactions, intent metrics, and user feedback across sprints, coordinating directly with back-end developers, UX designers, and product teams.

Bosch Financial Conversational Analytics Dashboard

- Owned end-to-end development of **ReactJS** UI components; built a dynamic chart-rendering engine using **Chart.js** (bar, line, radar) and integrated **RESTful APIs** — applying unit testing and **reducing manual report generation time to near-zero**.
- Independently debugged and resolved front-end issues across delivery sprints; evaluated library options and selected solutions with strong precedent, resulting in faster feature delivery.

KanhaJi AI – Cross-Platform AI Companion App (Android & iOS)

- Owned and delivered end-to-end a **React Native** application covering onboarding, personalisation, **AI chatbot** interfaces, and a conversation audit dashboard — integrating **LLM-based services** and managing the module independently from development to production.
- Adhered to **secure coding** practices; participated in **code reviews** and Agile stand-ups to maintain code readability and protect sensitive user data.

Live Chat Handoff & Tata IVR Management Portal

- Owned and built **responsive** front-end interfaces end-to-end using **ReactJS, HTML5, CSS3, and JavaScript**; guided team members on UI implementation and acted as quality point-of-contact for delivered modules.

Business Development & Pre-Sales

- Authored **project scope documents and delivery roadmaps**; wrote RFP responses for **NEGD, LIC, and SRA** and created proposals and pitch decks for **NITI Aayog** and **MAITRI Transformation** — translating technical product capabilities into structured client-facing narratives.
- Conducted **1-on-1 client calls** to gather and clarify business requirements; completed **on-site client visits** to develop deeper domain understanding and align CoRover’s solutions to real operational needs.

Personal Projects

Knodal AI – GenAI Analytics Platform (LLM + AI/ML API Integration)

- Independently designed and developed end-to-end **ReactJS** UI with a drag-and-drop **React Flow** dashboard builder supporting **600+ chart visualisations** — fully responsive and cross-browser compatible, achieving **zero critical UI bugs** at launch.
- Architected and integrated **LLM-based services** via a **RAG pipeline** (Groq / **Claude API**) enabling real-time natural language querying of MySQL, PostgreSQL, and MongoDB; demonstrated **Prompt Engineering** techniques in a structured knowledge-sharing session.
- Implemented an **AI-powered smart assistant** UI layer enabling non-technical users to query live data in plain English — directly analogous to copilot-style enterprise AI tooling.

Education

Model Institute of Engineering and Technology	2020 – 2024
B.Tech in Computer Science Engineering	CGPA: 8.0 / 10.0

Certifications

AWS Certified Cloud Practitioner

Achievements

Winner – Smart India Hackathon 2022 | *Ministry of Education, Govt. of India*
